

DOCUMENT NAME: PROGRESSIVE SUPRANUCLEAR PALSY, 'PSP CLUSTER, BRYNHYFRYD, GLYNNEATH (Draft document) published by Rugby Relics Ltd

DOCUMENT SUMMARY: Following the submission of the Council of Death document, within 3 months a second resident in our street died of an extremely rare neurodegenerative disorder in the houses closest to the site. Research into the disorder identified that the only other known case of a cluster was almost certainly related to ground contamination.

DOCUMENT SUBMITTED TO: Glynneath Town Councillors Haulwen Morgan & Gerry Reynolds on 1 May 2021 and NPTC Councillors Del Morgan & Simon Knoyle on 19/7/21.

PROOF OF DELIVERY: Video footage of the 4 documents being posted at their home address.

ANTICIPATED RESPONSE: We expected the Glynneath Town Councillors to pass the document on to the Glynneath Town Council. For the Glynneath Town Council to discuss the document in a full council meeting. For the Glynneath Town Council to approach NPTC with a view to ascertaining how they could inform the relevant national government authorities to request an investigation into the cause of death of the residents living closest the site.

ACTUAL RESPONSE: The Glynneath Town Councillors disposed of the documents and failed to provide them to the Glynneath Town Council. Only the covering letter to one of the councillors was discussed by the Glynneath Town Council. Simon Knoyle was at the time, the Mayor and Chair of Glynneath Town Council (Glynneath Town Council FOI attached as evidence).

Of the two reports posted to Councillors Knoyle and Morgan on 19/7/21, no reply has been received. However, we are aware that Councillor Knoyle has undertaken an investigation into the document contents which to date he has not made public. This would suggest that his investigation validates our conclusion that:

*“Residents of Brynhyfryd are dying from the rare neurological disorder Progressive Supranuclear Palsy. These deaths are almost certainly due to specified and other probable unspecified contamination tipped at the Heol y Glyn landfill site. Public officers who have covered up this contamination are potentially responsible for the unlawful killing of these residents.”*

The has been no counter evidence received from NPTC or GTC to dispute the document's findings.
