Dear Short Bro's Homes Ltd

Please find enclosed a draft report titled

"GLYNNEATH CONTAMINATION MURDERS, GEO-TECHNICAL & GEO-ENVIRONMENTAL REPORT - JULY 2009 - THE CREATION OF A FALSE TRUTH WITH TERRA FIRMA (WALES) LIMITED INFORMATION"

I would suggest that the content of the report and its relative allegations of crimes being committed with your toxicants are serious enough to warrant a response from your company. If you fail to respond accordingly with evidence to counter our stance it must be accepted that your company are willing to perpetuate the Corporate Homicide caused with your toxicants initiated by your predecessor Enzo Homes..

In view of your previous failure to respond to our communications I would suggest that if you fail to respond within one month from the date of delivery of this report then you accept the draft report's conclusion which is:

The original 149 page Geo-Technical & Geo-Environmental report's conclusion was falsified to cause the misrepresentation of a historical and current landfill site. This is known as

disinformation. The re-submitted report removed evidence that could disprove this information while cherry picking a singular piece of information that corroborated the disinformation. The report identified toxicants that were consistent with a landfill site and the report identified that these were dangerous to the human receptors living next to the site. The falsified conclusion of this document with regards the landfill status caused these poisons to be hidden. Following the submission of the document, people living around the site have died from cancers, neurodegenerative disorders, heart attacks and strokes, this list is not exhaustive. The majority of these resident deaths can be linked to toxicants found on the site through contaminated land, scientific and medical publications. The decision to cause a falsification of landfill status caused by this document in 2008 was a deliberate act of hiding toxicants, the result of hiding toxicants is the endangerment of human life. Based upon evidential probability, several people, potentially, more than 50 have died because of this disinformation. The decision makers with regards the creation of this information generated false-truth and the associated planning process delivery are liable for these deaths. The legislation which identifies this liability as a crime, is the Corporate Manslaughter and Homicide Act 2007 and the common law offence Gross Negligence Manslaughter.

Please note that if you fail to take action to prevent residents being murdered with your toxicants, you must accept that you become an accessory to this crime. I hope this letter and the report make our position clear.

regards
